

CVAT Complete Workflow Guide for Organizations

Welcome to CVAT.ai, this page is the place to start your team’s annotation process using the Computer Vision Annotation Tool (CVAT).

This guide aims to equip your organization with the knowledge and best practices needed to use CVAT effectively.

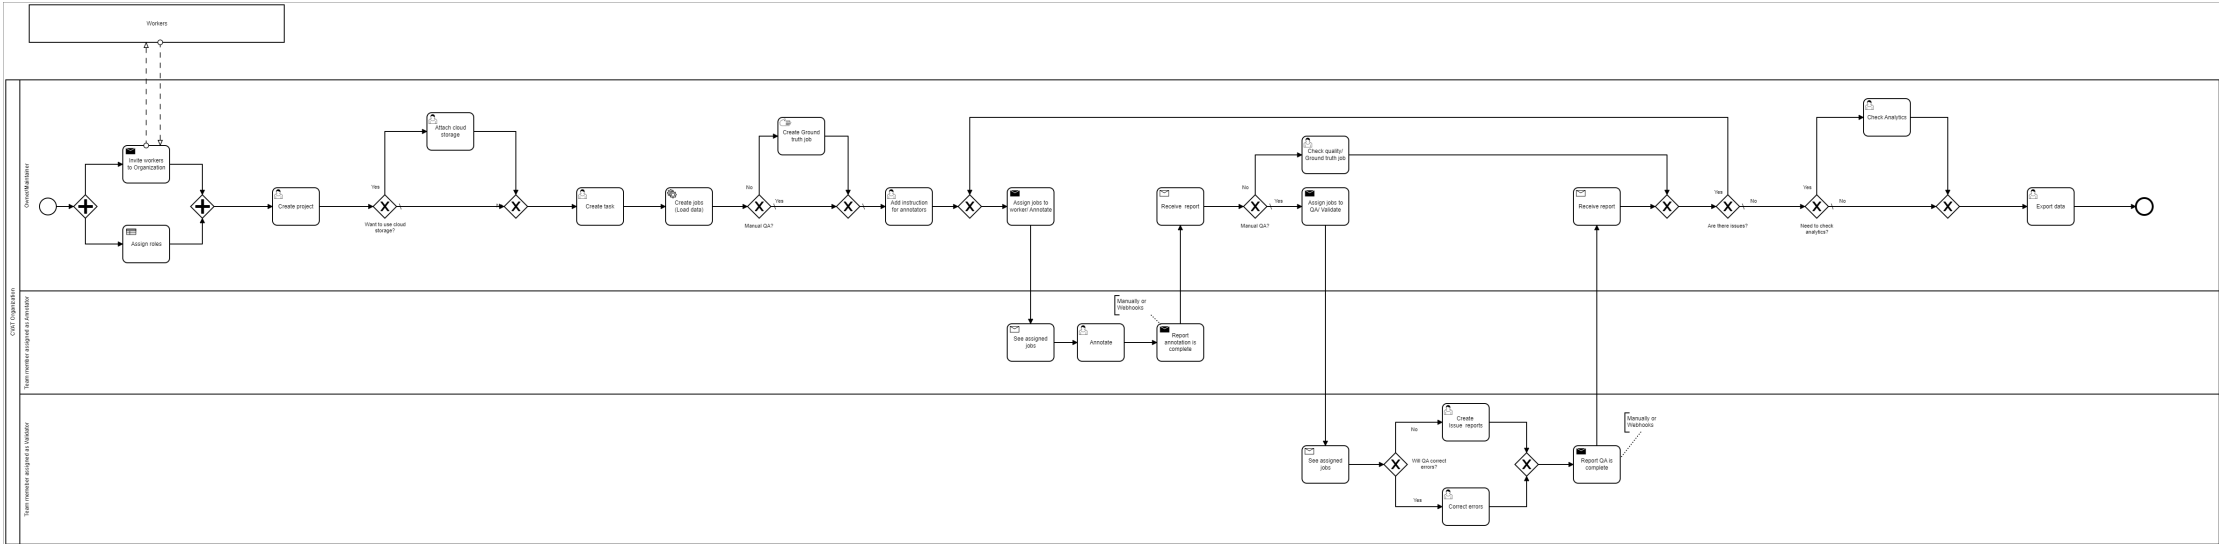

We'll walk you through every step of the CVAT workflow, from initial setup to advanced features.

See:

- [Workflow diagram](#)
- [End-to-end workflow for Organizations](#)
- [Complete Workflow Guide video tutorial](#)

Workflow diagram

The workflow diagram presents an overview of the general process at a high level.

End-to-end workflow for Organizations

To use CVAT within your organization, please follow these steps:

- [Create an account in CVAT.](#)
- Create **Organization**.
- Switch to the **Organization** that you’ve created and [subscribe to the Team plan](#).
- [Invite members to Organization](#) and assign [User roles](#) to invited members.
- Create **Project**.
- (Optional) Attach [Cloud storages](#) to the **Project**.
- Create **Task** or **Multitask**.
At this step the CVAT platform will automatically create jobs.
- (Optional) Create [Ground truth job](#).
This step can be skipped if you’re employing a manual QA approach.
- (Optional) Add [Instructions for annotators](#).
- (Optional) Configure [Webhooks](#).
- Assign jobs to annotators by adding the annotator name to **Assignee** and changing the [Job stage](#) to **Annotation**.
- Annotator will see assigned jobs and annotate them.
- (Optional) In case you’ve created a [Ground truth job](#) give the CVAT platform some time to accumulate the data and check the accuracy of the annotation.
- If you are using the manual validation, assign jobs to validators by adding the validator name to **Assignee** and changing the [Job stage](#) to **Validation**.
- Validator will see assigned jobs and report issues.
Note, that validators can correct issues, see [Manual QA and Review](#)

18. [Export Data](#).
