

Manual drawing

It is used for semantic / instance segmentation.

Before starting, you need to select `Polygon` on the controls sidebar and choose the correct Label.

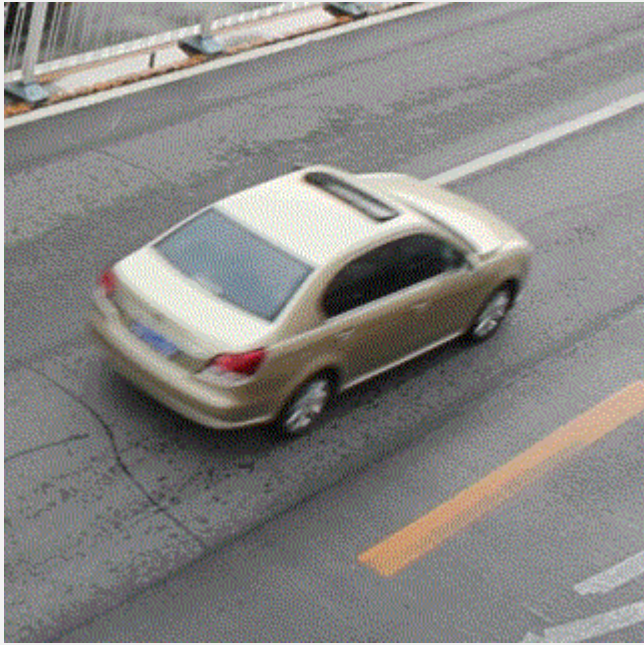

- Click `shape` to enter drawing mode. There are two ways to draw a polygon: either create points by clicking or by dragging the mouse on the screen while holding `shift`.

Clicking points

Holding Shift+Dragging

- When `shift` isn't pressed, you can zoom in/out (when scrolling the mouse wheel) and move (when clicking the mouse wheel and moving the mouse), you can also delete the previous point by right-clicking on it.
- You can use the `Selected opacity` slider in the `Objects sidebar` to change the opacity of the polygon. You can read more in the [Objects sidebar](#) section.
- Press `N` again or click the `Done` button on the top panel for completing the shape.
- After creating the polygon, you can move the points or delete them by right-clicking and selecting `Delete point` or clicking with pressed `Alt` key in the context menu.
